

ToughSonic™ Distance Sensors

Waterproof, Dual Outputs and Push-Button "Teachable"

TS-30S Series

**Non-Contact
Ultrasonic
Air Distance
Measurement**

TS-30S ultrasonic distance sensors contain a rugged transducer in a stainless steel case for long service life in tough environments. Typical applications include roll diameter, liquid level, motion control, positioning and dimensioning. They are excellent in tanks, drums and level applications.

Two outputs are available in many combinations, including analog 0-10/0-5 VDC, 4-20 ma. current loop, PNP (sourcing) switches, NPN (sinking) switches and RS-232/485 serial data. All outputs are relative to measured distance and adjustable anywhere in the sensor's range.

Features

- Sealed for ingress protection rating IP68 for washdown or outdoor applications like food processing or car washes
- Narrow ultrasonic beam to avoid unwanted obstacles
- Simple pushbutton "teachable" setup of many features, and calibration using actual targets
- Analog outputs are distance-proportional and adjustable anywhere in sensor's range
- Several standard analog output ranges
- Switch outputs have adjustable distance and polarity
- Output response filter for stability with poor targets
- Sync connection for several sensors in close proximity
- Security "Lock" prevents accidental mis-adjustment
- All in one small package!

Push-button "Teachable"

Up to 14-ft (4.25m) range in IP68 rated 30mm threaded housing

Reliable Operation

- Detects solid or liquids
- Unaffected by optical factors like color, transparency, reflectivity or opaqueness
- Stable output if target is lost
- Industrially rated interfaces
- Heavy duty 303 stainless case, 30x1.5 mm threaded, waterproof with IP68 rating

Easy Installation

- Quick bolt-in mounting
- Permanently attached cable
- Rear indicator displays output status and fault conditions
- Simple push-button setup - no potentiometers!

Two Ranges

The TS-30S series is available in two ranges. The shorter range model is useful when a small deadband is required due to space limitations.

Color/Transparency
Unaffected by color, transparency or optical characteristics.

Orientation
Detects flat or curved objects. Surface must reflect back to sensor. Flat surfaces are best when perpendicular to beam axis, and may not be detected at high angles of incidence.
